

SECURE, RECOVER AND SAVE!

COMMUSERV ARE EXCITED TO ANNOUNCE A VERY NECESSARY PACKAGE TO ALL VIP SERVER CUSTOMERS

We spend hours maintaining and ensuring your systems are in sound working order, unfortunately there are many obstacles:

VIRUSES

SOFTWARE UPDATES

FILE CORRUPTION

The technology mix of software and hardware listed below enables automatic live state backups of the entire server every 4 hours. This means the team of Commuserv can recover your main system without needing to reinstall, rebuild or spend many hours troubleshooting. Simply recover from the external NAS Hard Disk box to the same system or even new equipment within 2 hours. We recommend housing the NAS box remotely from the server system for security and disaster recovery action planning. Where you have additional servers, an extra software licence is required for each server.
